

Addressing Vaccine Hesitancy Toolkit

A toolkit for sharing messages with rural and other minority populations

A resource made possible by:

Introduction

Founded in 1995, The Rural Health Association of Tennessee (RHA) is a not-for-profit 501c3 organization of individuals and organizations committed to improving the health of rural Tennesse-ans. Our members of rural health care providers, school health professionals, and others who care about rural health, have worked to affect positive change in the health and well-being of all rural people in Tennessee. By proactively involving our members, partner organizations, and policymakers, we identify rural health concerns and work to resolve those issues through service, education, and advocacy.

Addressing Vaccine Hesitancy has been a top priority since the start of the COVID-19 pandemic. This toolkit has been developed with the hope that members and partners will take the information used and share in their local newsletters, social media profiles, websites, etc. The toolkit includes:

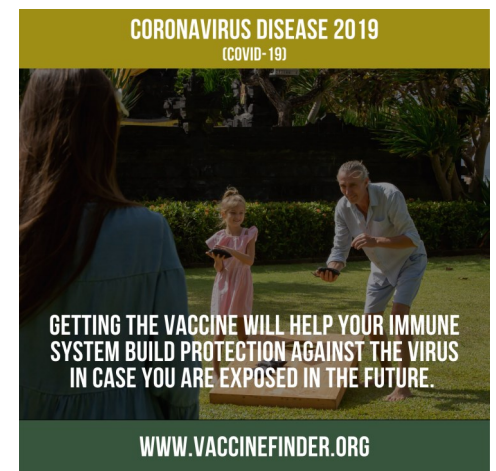

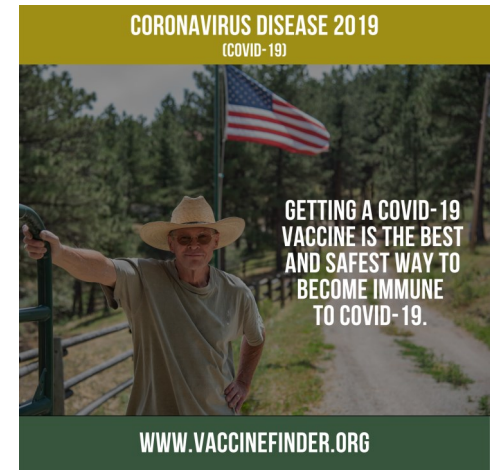

- Communication tips for building vaccine confidence
- State and federal resources to explore
- Sample social media messages
- Unbranded graphics for sharing ([Click to download images](#))

RHA Learning Events

- [Talking Vaccines in a World of Vaccine Misinformation](#) (recorded November 2020)
- [Addressing Vaccine Hesitancy in Rural Communities](#)
 - Hesitancy in Rural Communities of Color; April 27, May 4, 2021
 - Hesitancy in Rural Appalachia; April 29, May 6, 2021

Our Pledge

We pledge to help share positive, accurate, and culturally appropriate messages to help build vaccine confidence. Join us by taking our pledge at <http://www.tnruralhealth.org/action-center>.

Addressing Vaccine Hesitancy

A toolkit for sharing messages with rural and other minority populations

Building Vaccine Confidence

There are many valid reasons individuals are hesitant to get vaccinated.

Before getting vaccinated, people have the right to have all their questions answered so they can feel confident they are making the best choice for themselves and/or their family.

Take the time to have meaningful conversations about vaccines, address concerns, and discuss the importance of all vaccines to our country.

**RURAL
HEALTH**
ASSOCIATION
OF TENNESSEE 

Communication Tips

Acknowledge Concerns - People no matter their background, want to know they are understood. A simple “I understand your concerns” goes a long way to build trust and communication.

Personalize Approach - Statistics, scientific studies, and data are not as persuasive as personal stories. Sharing your expertise, experience, and empathy is a great way to build confidence in vaccines.

Make a Recommendation - Nobody should feel pressured or shamed into getting a vaccine. Simply share with patients/clients the recommendation to be vaccinated and support making a plan to do so.

Educate about Vaccines - The COVID-19 vaccine is not the only vaccine that keeps our country and state healthy. Take opportunities to discuss the importance of vaccines as a whole, not just COVID-19.

Consistency - Mixed messages create greater fear and hesitancy. To the extent possible, make certain everyone in your practice, school, or organization is sharing the same information from agreed upon and trusted resources.

Share Resources - Some people need to hear, read, and/or process information multiple times and in different ways. Provide resources for people to reference at a later date and share with their loved ones.

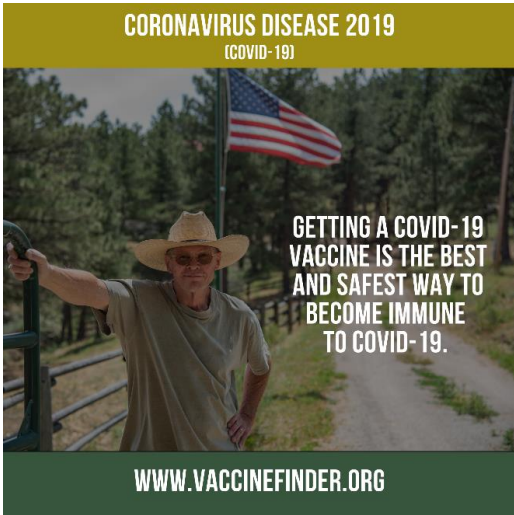

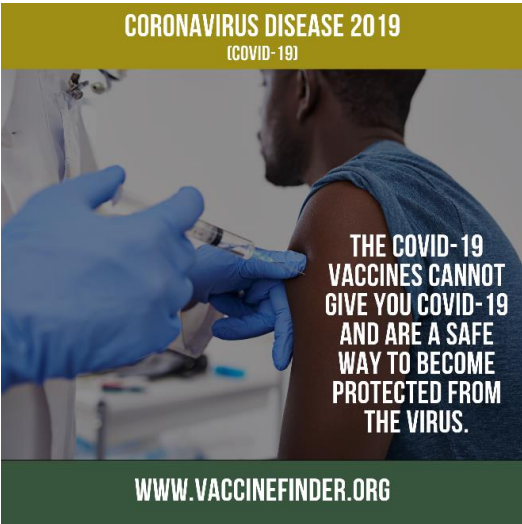

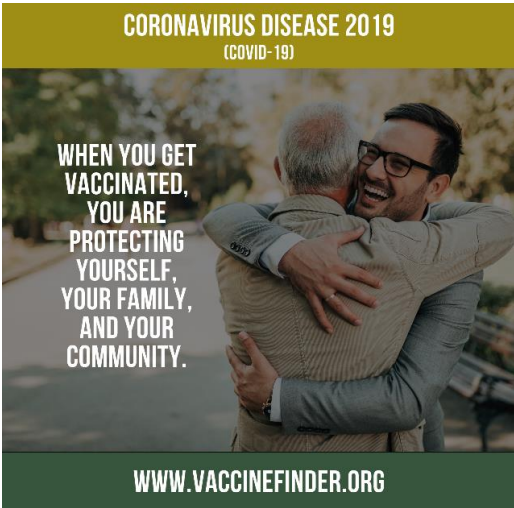

Pro Tip

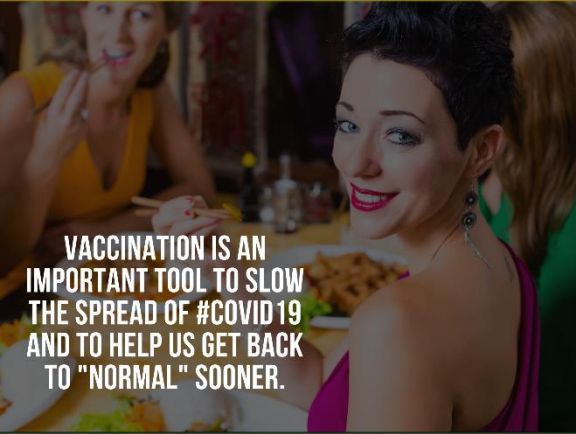

Healthcare and community professionals, no matter their specialty or training, are seen as leaders in rural and other minority communities. When discussing vaccines, being personal, positive, and consistent makes conversations more memorable and persuasive.

Communication Tips

- When possible, make messages personal. Include experience and/or local information when relevant.
- Keep messages positive. There are many reasons people may be vaccine hesitant. It is important to have these conversations in positive and respectful ways.
- If people have special medical concerns, suggest they at minimum have a conversation with their doctor or other healthcare provider to address those concerns in more detail.
- If there are local vaccination efforts, include the Day, Time, Location of the events along with the www.vaccinefinder.org website in case they don't see the post until after an event.
- Follow Tennessee Department of Health on your social media pages so that you can re-share/tweet new information and messages to your followers.

How often should you post?

- We recommend picking three messages to share each month between now and the rest of the year. If you have the opportunity to post more frequently, share personal and or local stories, and/or re-share department of health messages.
